Happymina (App for Anxiety Management)

UX & Prototype Implementation

My Role

Led user research and testing, co-developed the concept, and contributed to interaction design and prototype development, including experimental validation with physiological data.

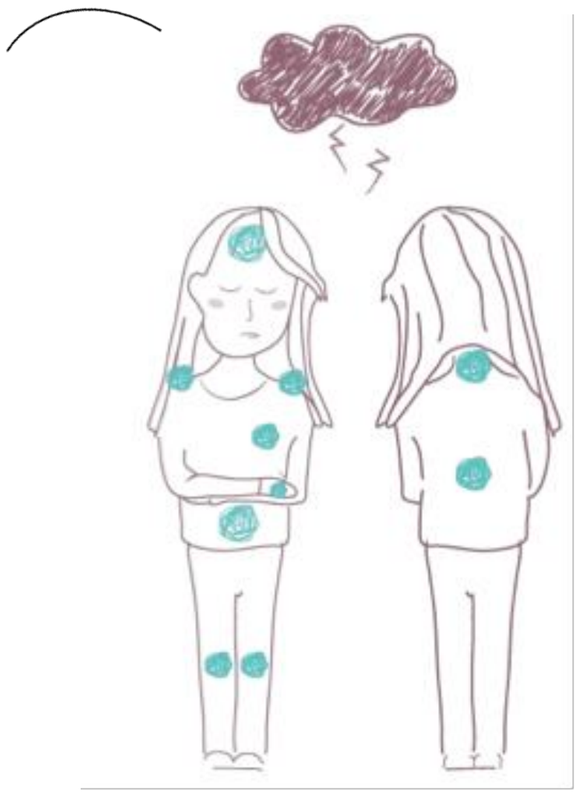
Persuasive Technology . Health & Well-being

Problem Statement

Anxiety

affects daily functioning

requires continuous support/monitoring



Research Process

Existing Apps Analysis

Compared popular anxiety apps

Identified strengths and gaps

Coping Strategies

Breathing exercises, positive feedback

Identified effective methods

Behavior & Needs Study

Conducted user interviews and survey

Identified triggers and preferences

Project Duration

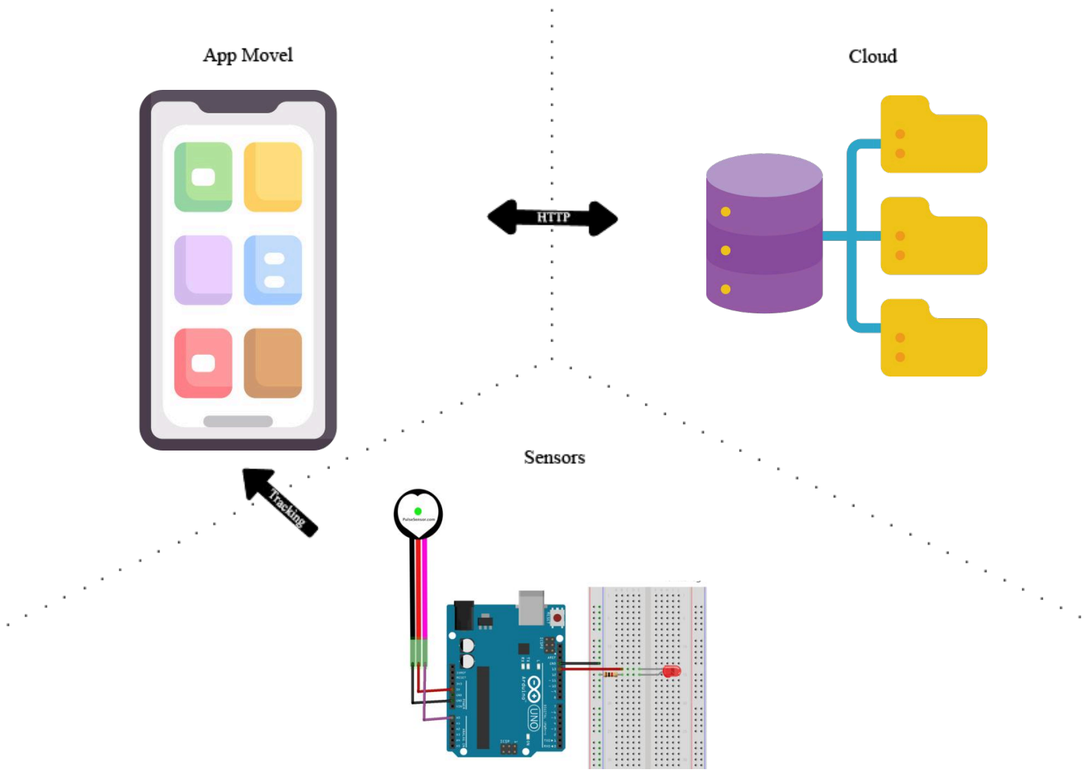
4 weeks

50+ screens

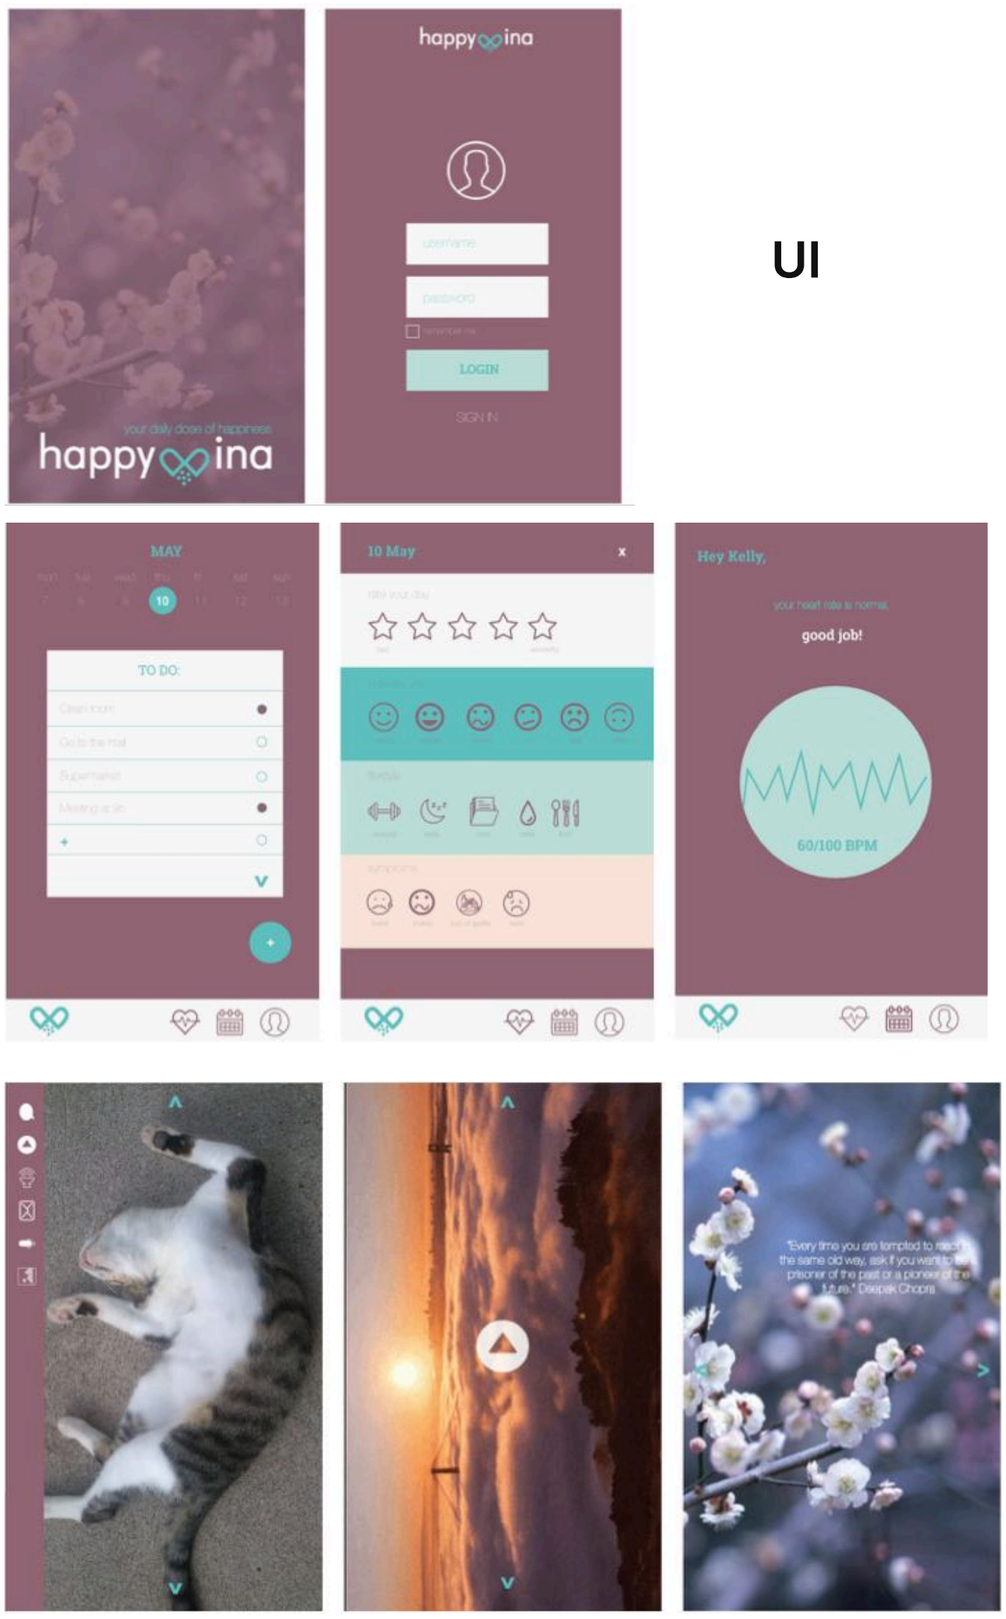
Tools Used

Ai P Marvel

Development **Prototype**



System Architecture



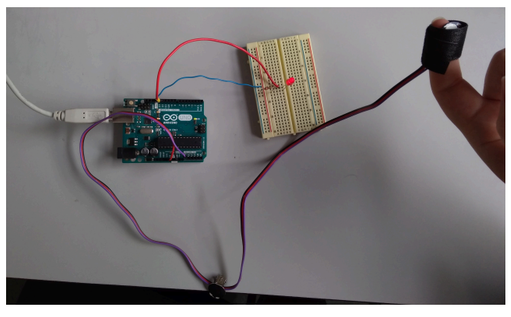
UI

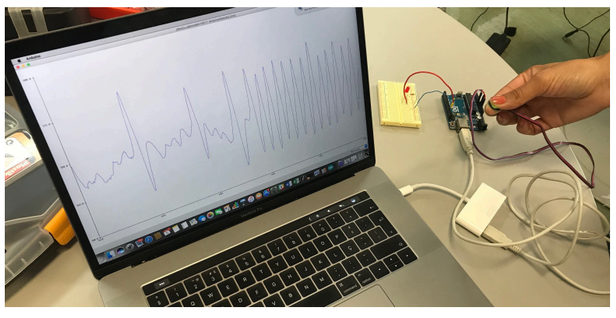
Users Tests

14 users (experiencing anxiety/ with previous anxiety episodes)

Task-based testing / Think-aloud

Evaluate usability & emotional response





Key Insights

Users preferred simple and immediate interactions

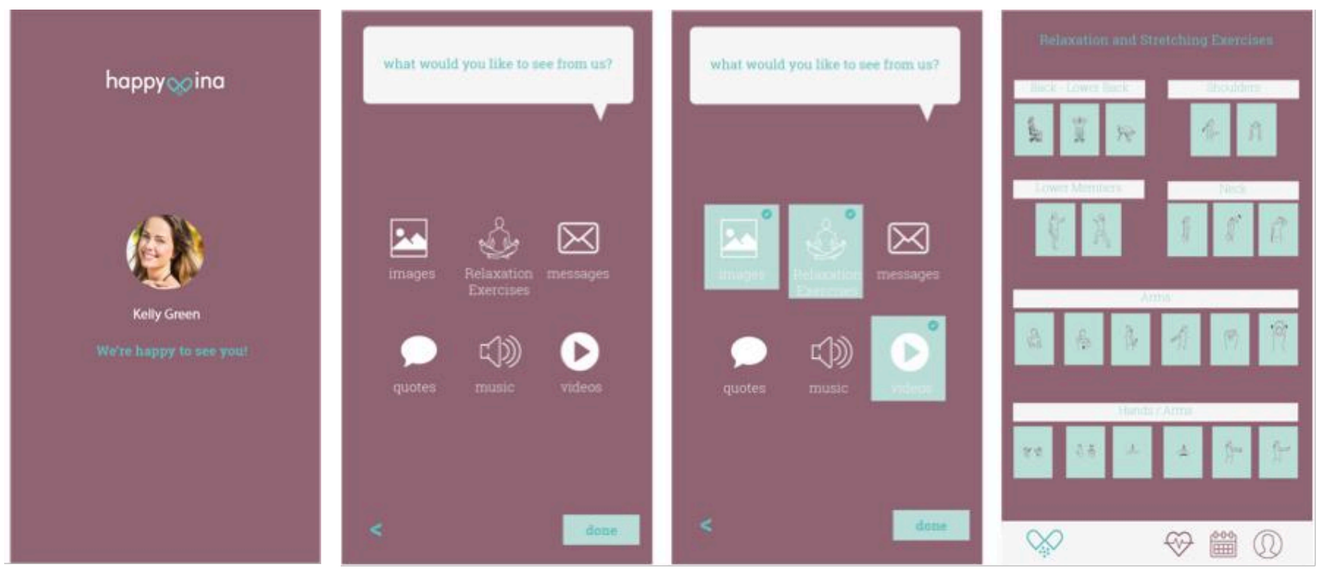
Breathing exercises - helpful and calming

Some users struggled with navigation clarity

Some users struggled with navigation clarity

Modifications / Improvements

Profile customization feature (photo upload)

Added guided breathing exercises


Calming interactions and clarity of use
