Smart Hike (Redesigning Service)

UX Design

Madeira Island Context

My Role

Co-developed the project across research, ideation, and prototyping

SMART HIKE

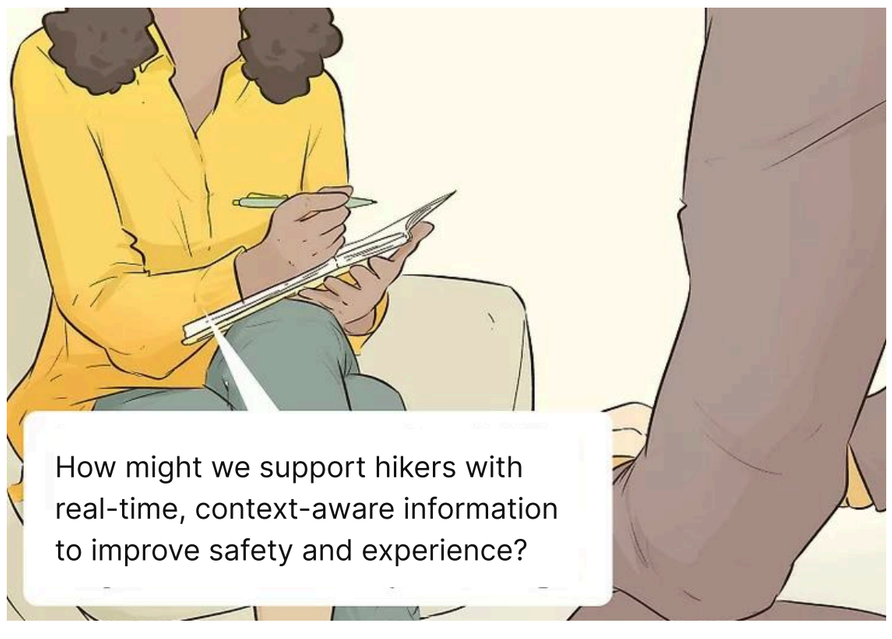
Context-aware Design . Service Design . User Experience

Problem Statement

Traditional hiking information panels are static, outdated, and fail to adapt to users' context, limiting relevant, timely, and engaging information during the hiking experience.

Research Process

Interviews with mountain guides



Key Insights

Need for real-time contextual information

Safety concerns during hikes

Existing apps lack adaptability to user context

Benchmarking

	Smart Hike	GeoD Porto Santo	WalkMe & eWalk	Grand Canyon Ntl Park
Logo	SMART HIKE			
Usability	Easy to use Intuitive Fun Adaptable to different users	Easy to use Intuitive	Easy to use Intuitive	Easy to use Practical interface
UI	Multi-touch Straightforward Easy to use	Simple Interface Learn geodiversity	Little massive visually Great visual reference (photography)	Simple Interface Rich in information
Utilities	Adaptable to different scenarios Informative and Historical Weather Resistant	Built for offline use Educational and scientific uses	Built for offline use Helping walkers Can plan your hikes SOS numbers	Built for GPS devices Push notifications Calendar events More info (places)

Concept

Project Duration

2 weeks

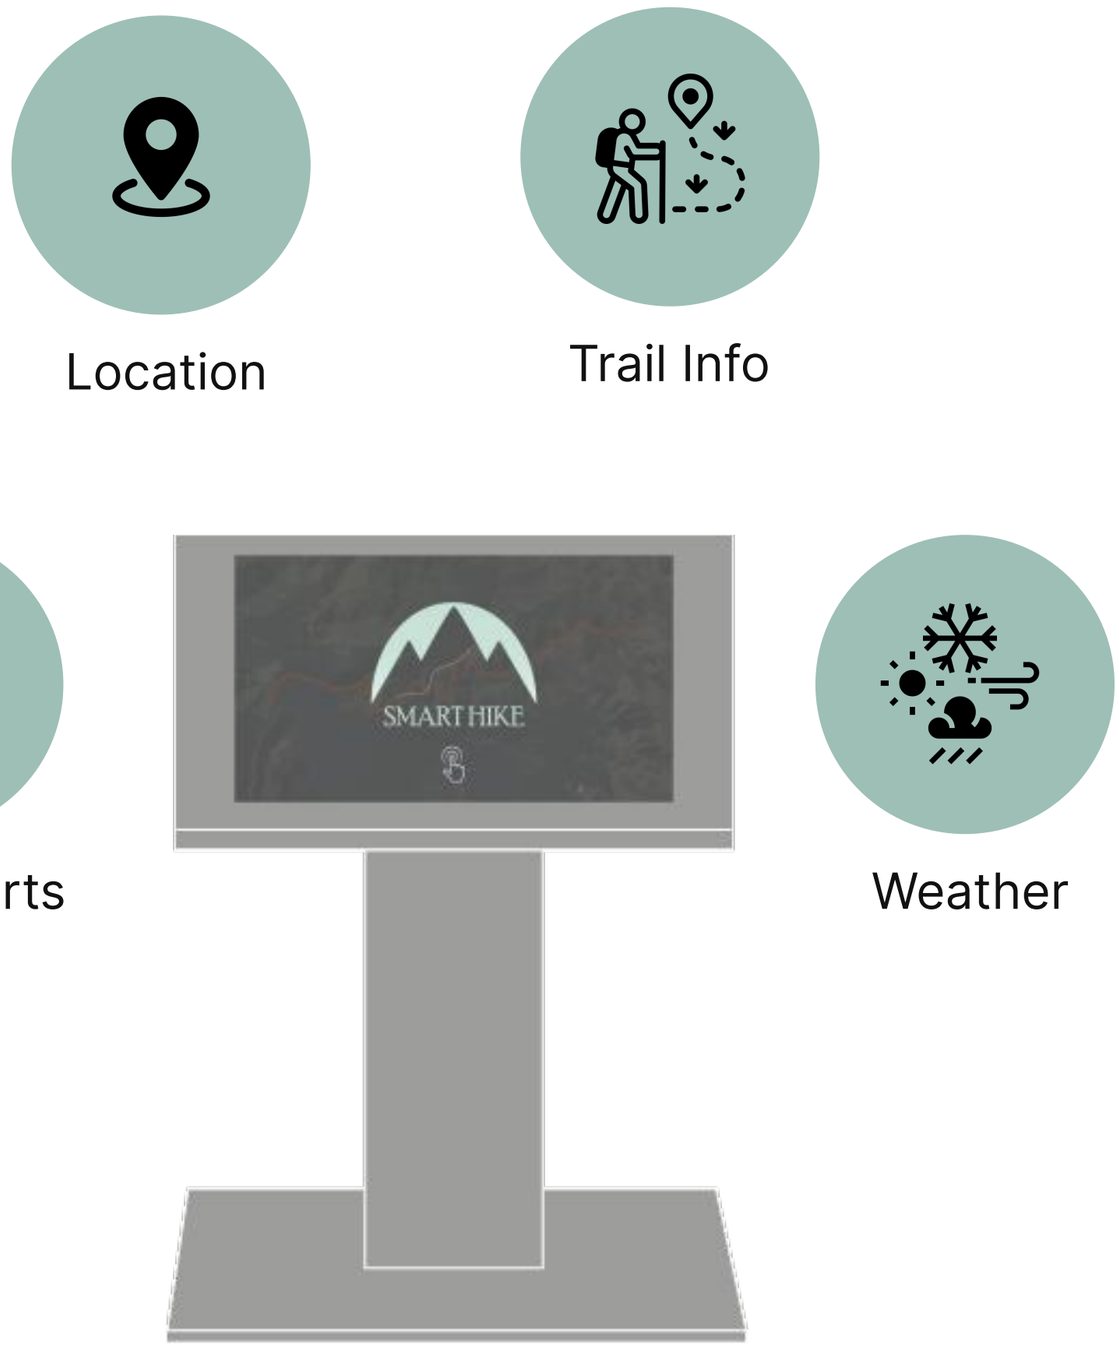
20+ screens

Tools Used

invision Ai

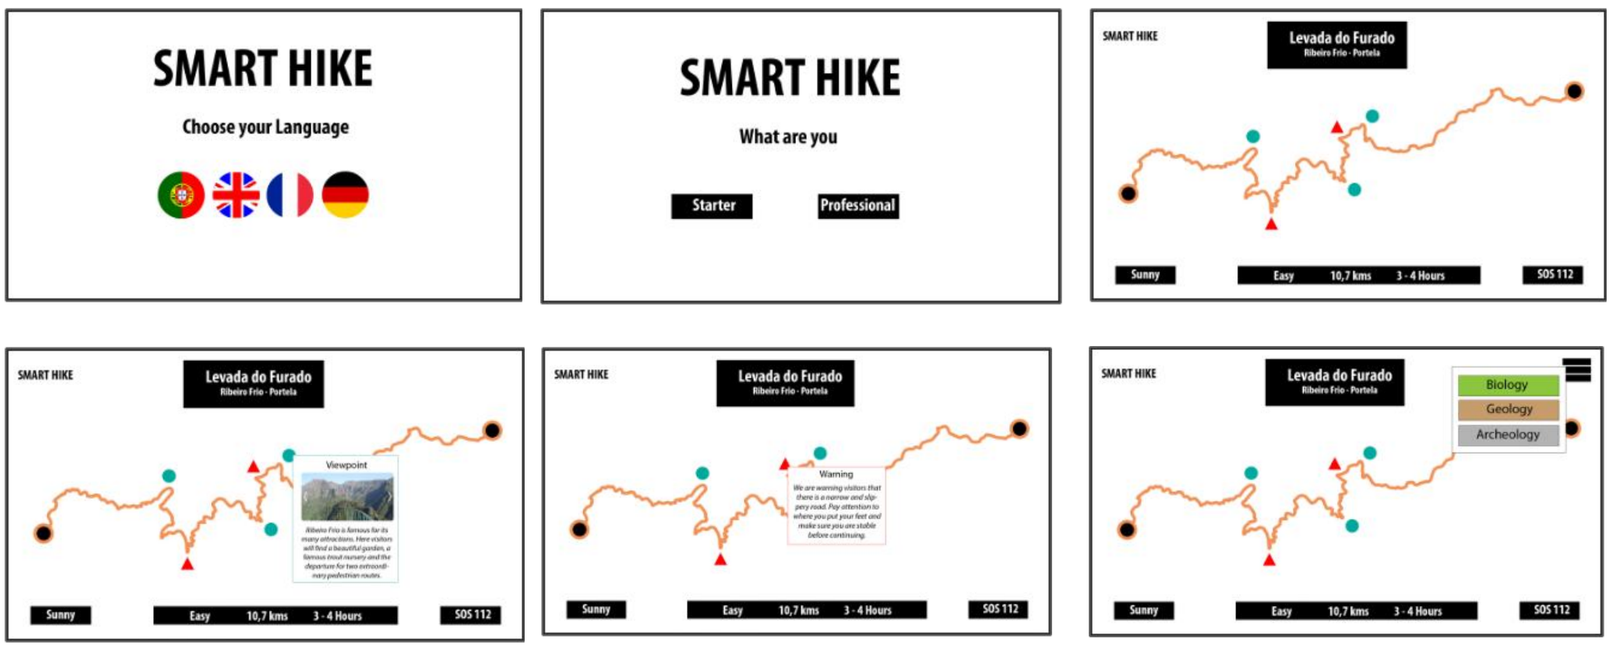
Design **Process**

A context-aware system that provides relevant information based on the user's environment



Relevant Information to Hiker

Low-Fidelity Exploration



High-Fidelity Exploration

The final solution is a context-aware kiosk that provides hikers with relevant information based on their location and environment
