Situated Game for University Campos Users

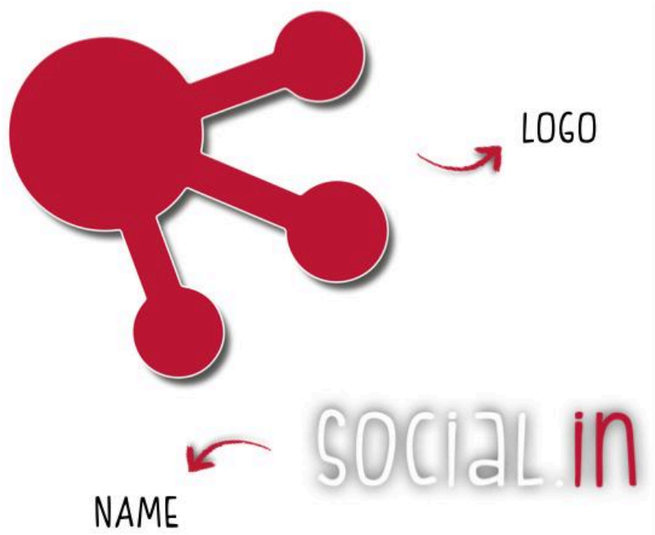
Branding / Design

UX **Case Study**

My Role

Co-developed the research and concept, led low-fidelity prototyping, and contributed to high-fidelity interface design

User-Centered Design . Mobile App . Social Interaction



Research **Problem**

International students at M-ITI and the University of Madeira experience barriers in daily life due to language difficulties, lack of social integration, and limited engagement with local culture.

These challenges impact not only their academic experience but also their ability to form meaningful social connections.

Research **Methods**

12 open-ended questionnaire

16 participants (international students)

Exploratory qualitative approach

Insights

The study revealed three major pain points

Communication barriers severely affect everyday activities

Social isolation due to limited interaction with local students

Low engagement with the local environment

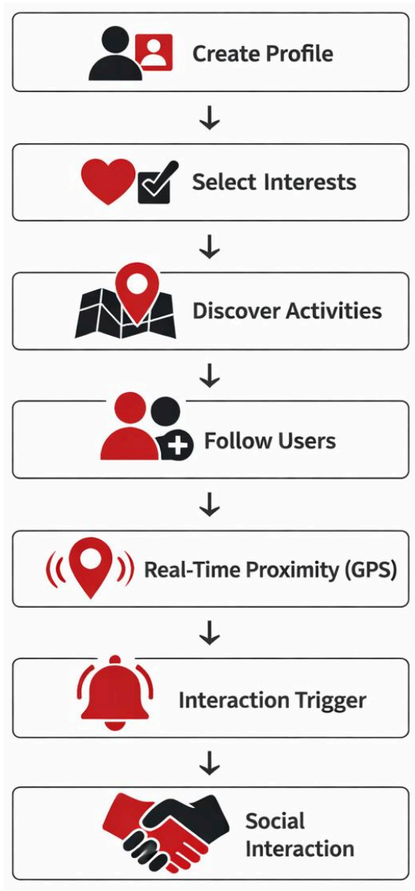
Design **Opportunity**

Facilitates communication between students

Encourages social interaction

Promotes shared activities

App Concept



Project **Duration**

4 weeks

20+ screens

Tools Used

balsamiq

Ai

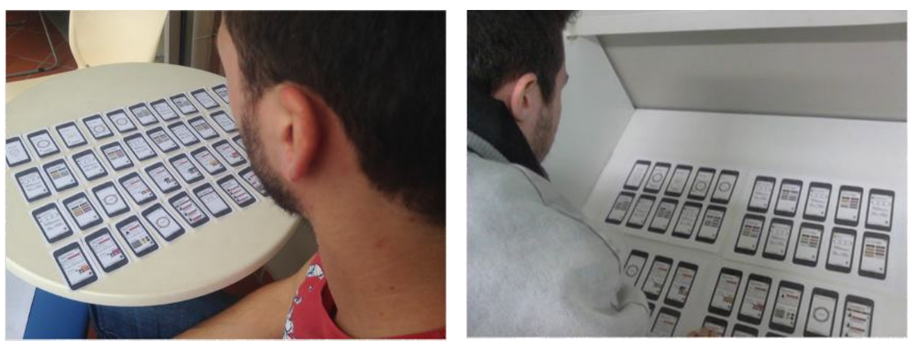
invision

Design **Process**

Initial low-fidelity prototypes were created to explore interaction flows and core features

User Testing

4 users · Think-aloud protocol



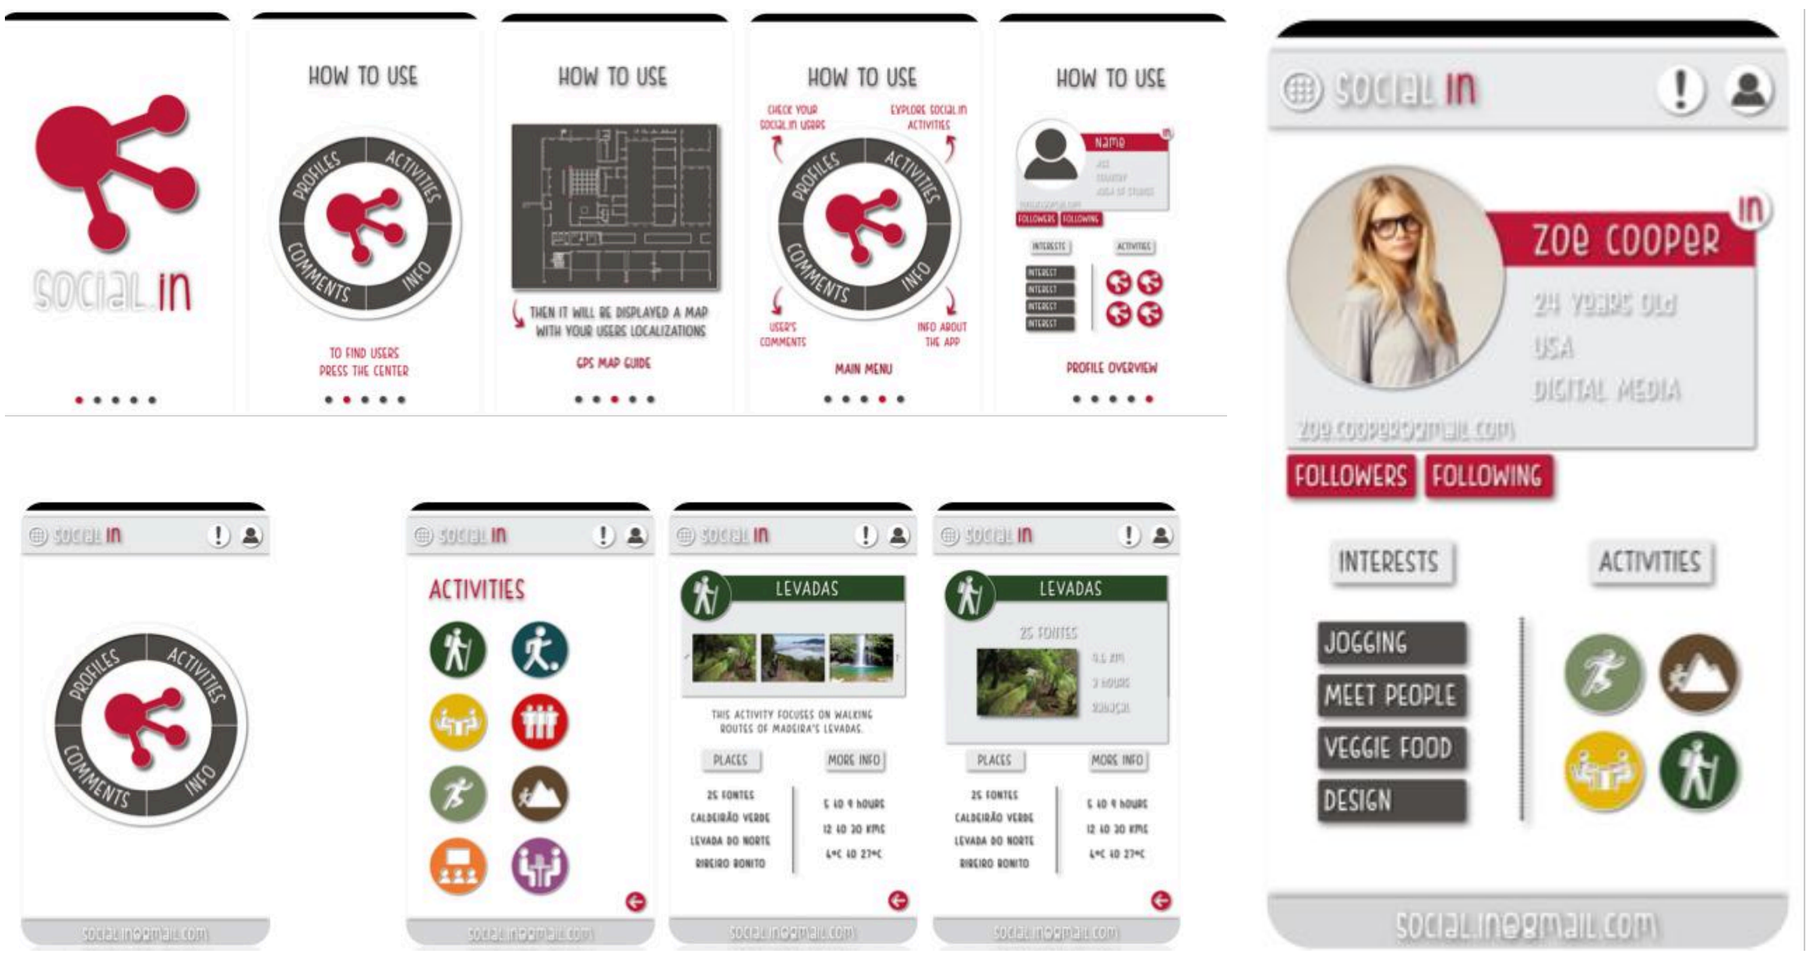
Interactions

Clarified meaning of “in” button

Improved navigation to “following”

Increased icon clarity and size

High-Fidelity Prototype



Final interface refined based on user feedback, improving usability and clarity
